

maths for mums and dads

Maths for Mums and Dads: Supporting Your Child's Learning Journey

maths for mums and dads is a phrase that captures a growing movement among parents who want to actively support their children's mathematical understanding. Whether you loved maths at school or found it tricky, engaging with your child's maths education can be rewarding and surprisingly straightforward. This article explores practical ways parents can boost their child's numeracy skills, demystify common maths concepts, and build confidence in both themselves and their youngsters.

Why Maths for Mums and Dads Matters

Many parents feel anxious when it comes to helping with maths homework. The curriculum has changed, and what once worked for you might now seem unfamiliar. This can lead to hesitation or avoidance, but the reality is that your involvement is one of the most important factors in your child's success. Research shows that parental engagement in maths boosts children's achievement and attitude toward the subject.

By embracing maths for mums and dads, you not only help your child grasp essential skills, but you also foster a positive mindset around maths. Children often mirror their parents' feelings; if you show enthusiasm and patience, they're more likely to enjoy learning numbers and problem-solving.

Understanding the New Maths Curriculum

Primary and secondary school maths now emphasize problem-solving, reasoning, and conceptual understanding rather than rote memorization. Parents can benefit from a quick refresher on key topics:

Key Maths Concepts to Know

- **Number Sense:** Understanding place value, comparing and ordering numbers, and recognizing patterns.
- **Operations:** Addition, subtraction, multiplication, and division with an emphasis on mental strategies.
- **Fractions and Decimals:** Visualizing parts of a whole and converting between fractions, decimals, and percentages.
- **Geometry:** Shapes, symmetry, and basic properties of angles.

- **Measurement:** Units of length, mass, volume, and time, including practical applications.
- **Data Handling:** Reading graphs, charts, and interpreting data sets.

Parents don't need to become maths experts overnight but having a grasp of these areas enables you to guide your child effectively.

Practical Tips for Maths for Mums and Dads

Helping your child with maths doesn't have to be a chore. Here are some strategies to make the experience enjoyable and constructive:

1. Incorporate Maths into Everyday Life

Maths is everywhere, from cooking to shopping to travel. Use daily activities as natural opportunities to practice maths skills. For example:

- Cooking together can teach measurements and fractions.
- Shopping provides practice with addition, subtraction, and understanding money.
- Planning journeys develops skills in telling time and estimating distances.

This approach makes maths relevant and shows your child its practical value.

2. Use Visual Aids and Tools

Many children learn better with visual or tactile resources. Maths manipulatives like counters, fraction circles, or even household items like coins and buttons can help make abstract concepts tangible.

Online apps and educational games designed for children also provide interactive ways to practice skills without pressure.

3. Encourage a Growth Mindset

One of the most important aspects of maths for mums and dads is fostering the belief that ability improves with effort. Praise your child's perseverance rather than innate talent. Remind them (and yourself) that mistakes are part of learning.

Instead of saying “You’re not good at maths,” try “Let’s figure this out together” or “What can we try next time?”

Supporting Different Age Groups

Early Years and Primary School

At this stage, focus on developing number sense and basic operations. Counting games, number songs, and simple puzzles can build foundational skills. Reading picture books that incorporate counting or shapes can also be fun and educational.

Secondary School and Beyond

As maths becomes more complex, parents can support by helping their children break down problems into smaller, manageable steps. Encourage the use of revision guides, practice papers, and online tutorials.

Discuss real-life applications of maths topics like algebra or statistics to keep motivation high.

Overcoming Common Challenges in Maths for Mums and Dads

It’s normal to encounter hurdles, whether it’s feeling unsure about maths yourself or dealing with a child’s frustration. Here are some ways to handle these challenges:

- **Seek Resources:** Many schools offer workshops or recommend helpful websites and books tailored for parents.
- **Collaborate with Teachers:** Don’t hesitate to communicate with your child’s teacher for guidance on how best to support learning at home.
- **Be Patient:** Progress can be slow, but consistent encouragement builds confidence over time.
- **Use Peer Learning:** Sometimes children respond well to explanations from siblings or friends who understand the material.

Building Confidence Through Routine and Encouragement

Maths for mums and dads thrives when it becomes part of your family routine. Setting aside a regular time for maths activities, even for just 10-15 minutes a day, can make a big difference. Celebrate small victories like mastering multiplication tables or solving a tricky problem to keep motivation strong.

Remember, your attitude toward maths heavily influences your child. Approaching the subject with curiosity and enthusiasm creates a supportive environment where learning flourishes.

Using Technology to Enhance Maths for Mums and Dads

In today's digital age, numerous apps and websites offer tailored maths practice for children of all ages. Interactive platforms often provide instant feedback and adapt to the learner's level, making maths practice more engaging.

Some popular educational tools include:

- Mathletics
- Khan Academy
- Prodigy Math Game
- BBC Bitesize Maths

These resources can supplement homework and provide extra practice in a fun, pressure-free way.

Encouraging Curiosity and Exploration

Maths isn't just about numbers on a page; it's about patterns, logic, and problem-solving. Encourage your child to ask questions like "Why does this work?" or "How can I figure this out differently?" This curiosity builds deeper understanding and makes maths an exciting challenge rather than a chore.

Sharing your own experiences with maths, including moments when you found something tricky or interesting, helps normalize the learning process.

Engaging with maths for mums and dads is a journey of discovery for the whole family. With patience,

creativity, and the right tools, maths can become a positive and even enjoyable part of your daily life. Your involvement not only improves your child's skills but also strengthens your relationship through shared learning and achievement.

Frequently Asked Questions

What is 'Maths for Mums and Dads' about?

'Maths for Mums and Dads' is a guide designed to help parents understand the math their children are learning at school, enabling them to support their kids effectively.

Why is it important for parents to learn the methods taught in schools today?

Math teaching methods have evolved, and understanding current approaches helps parents assist their children correctly and boosts children's confidence in maths.

How can parents help their children with homework without doing it for them?

Parents can encourage problem-solving by asking guiding questions, explaining concepts in simple terms, and fostering a positive attitude towards maths rather than giving direct answers.

Are there online resources related to 'Maths for Mums and Dads'?

Yes, there are various websites and videos inspired by 'Maths for Mums and Dads' that provide tutorials, explanations, and practical activities for parents.

What are some common misconceptions parents have about modern maths teaching?

Many parents think maths is only about memorizing facts and procedures, but modern teaching emphasizes understanding concepts and problem-solving skills.

How can parents make maths fun and engaging for their children?

Incorporating games, real-life scenarios, and interactive activities can make maths enjoyable and relatable for children.

Does 'Maths for Mums and Dads' cover all school levels?

It primarily focuses on primary school maths but provides foundational concepts useful for understanding maths at various stages.

How can parents build their own confidence in maths?

By reviewing basic concepts, practicing problems, and using resources like 'Maths for Mums and Dads', parents can gradually improve their maths skills and confidence.

What role does parents' attitude towards maths play in children's learning?

Positive attitudes towards maths from parents can encourage children to develop a growth mindset and reduce maths anxiety.

Can understanding school maths methods help parents communicate better with teachers?

Yes, knowing the methods and terminology used in schools helps parents engage in meaningful conversations with teachers about their child's progress.

Additional Resources

Maths for Mums and Dads: Navigating Numeracy in Parenting

maths for mums and dads is an increasingly important topic as parents seek to support their children's education and foster a positive attitude towards numeracy. In a world where mathematical skills underpin not only academic success but also everyday decision-making, understanding how parents can engage with maths is paramount. This article explores the challenges parents face, the resources available, and effective strategies for integrating maths into family life, all through a professional and analytical lens.

Understanding the Role of Parents in Children's Mathematical Development

Parental involvement is a critical factor influencing children's academic achievement, particularly in subjects like mathematics. Research consistently shows that children perform better when their parents actively participate in their learning process. However, for many mums and dads, maths can be a source of anxiety or uncertainty, stemming from their own experiences or perceived difficulty with the subject.

According to a 2023 study by the Education Endowment Foundation, children whose parents regularly engage with their maths homework or discuss numerical concepts at home see up to a 15% improvement in standardized test scores. This suggests that empowering parents with the right tools and confidence can have a measurable impact on student outcomes.

The Challenge: Maths Anxiety Among Parents

Maths anxiety is not confined to students; it affects many adults, including parents who may feel ill-equipped to help with homework or explain mathematical concepts. This anxiety can inadvertently transmit to children, shaping their attitudes towards the subject. A 2022 survey by the National Numeracy charity found that nearly 40% of parents admit to feeling anxious when dealing with maths-related tasks involving their children.

This phenomenon, often termed “intergenerational maths anxiety,” highlights the need for accessible and supportive resources tailored to parents. Without intervention, the cycle of apprehension and avoidance can perpetuate, limiting children’s confidence and achievement in maths.

Resources and Tools Designed for Parents

To address these challenges, a variety of resources have emerged specifically aimed at mums and dads. These range from online platforms, mobile apps, to community workshops and printed guides. The diversity of options reflects a growing recognition of parents’ roles as co-educators.

Some notable features of effective maths resources for parents include:

- **User-friendly explanations:** Breaking down complex concepts into simple, relatable terms.
- **Interactive content:** Games and activities that encourage engagement rather than passive reading.
- **Alignment with school curricula:** Ensuring parents can support homework and exam preparation effectively.
- **Flexible access:** Available on multiple devices and platforms to fit busy family routines.

Platforms such as Khan Academy and BBC Bitesize have sections dedicated to helping parents understand key mathematical concepts. Moreover, local education authorities often run workshops or provide materials aimed at boosting parental confidence in supporting numeracy.

Strategies for Integrating Maths into Family Life

Beyond formal educational materials, integrating maths naturally into everyday activities can demystify the subject and make it more approachable for both parents and children. This practical engagement helps nurture curiosity and develop problem-solving skills in authentic contexts.

Everyday Maths Opportunities

Simple household tasks can become maths learning moments. For example:

1. **Cooking and Baking:** Measuring ingredients introduces fractions and proportions.
2. **Shopping:** Calculating discounts, comparing prices, and budgeting enhance arithmetic skills.
3. **Travel Planning:** Estimating distances, time, and costs involves practical applications of maths.
4. **Games and Puzzles:** Board games like Monopoly or Sudoku foster logical thinking and numerical fluency.

These activities not only improve mathematical understanding but also encourage positive parent-child interaction around the subject.

Developing a Growth Mindset Towards Maths

A professional approach to supporting maths learning involves fostering a growth mindset — the belief that abilities can be developed through effort and practice. Parents who model resilience and a positive attitude towards maths help their children overcome challenges and persevere.

Educational psychologist Carol Dweck's research highlights that praising effort rather than innate ability leads to better learning outcomes. For mums and dads, this means emphasizing the process of problem-solving rather than just correct answers, which can reduce pressure and encourage experimentation.

Comparing Traditional and Modern Approaches to Parental Maths Support

Historically, parental support for maths was largely limited to homework supervision or occasional tutoring. Today's landscape offers a broader spectrum of engagement, reflecting advances in technology and educational psychology.

Traditional Methods

- Direct assistance with homework.
- Use of printed textbooks and workbooks.
- Reliance on formal school communication for guidance.

Modern Approaches

- Interactive apps tailored to both children and parents.
- Online video tutorials and webinars.
- Collaborative learning communities and forums.
- Real-time progress tracking and personalized feedback systems.

The modern toolkit provides parents with greater flexibility and resources, reducing barriers caused by limited maths knowledge or time constraints.

Pros and Cons of Digital Resources for Parents

While digital tools have revolutionized access to maths support, they come with benefits and drawbacks that parents need to consider.

- **Pros:**

- Convenience and accessibility.
- Engaging multimedia content.
- Ability to tailor learning to individual needs.

- **Cons:**

- Potential for screen fatigue.
- Varied quality and reliability of online resources.
- Requires digital literacy and internet access.

Balancing traditional and digital methods often yields the best outcomes, allowing parents to maximize support without overwhelming themselves or their children.

Looking Ahead: The Future of Maths Engagement for Parents

As education continues to evolve, so will the resources and strategies available to mums and dads.

Emerging technologies such as augmented reality (AR) and artificial intelligence (AI) hold promise for creating immersive and personalized learning experiences. Additionally, greater emphasis on parental education and community involvement is likely to enhance the support ecosystem.

Encouragingly, the narrative around maths for parents is shifting from one of apprehension to empowerment. By equipping mums and dads with knowledge, confidence, and practical tools, the educational community is fostering an environment where maths is accessible, relevant, and even enjoyable within the family setting.

Ultimately, the combined efforts of parents, educators, and policymakers can help break down barriers and cultivate a generation of learners who view maths not as a hurdle but as an integral, manageable part of life.

Maths For Mums And Dads

maths for mums and dads: Maths for Mums and Dads Mike Askew, Rob Eastaway, 2010-07-06
Looking for a practical maths guide to help with home schooling? Maths for Mums and Dads is the solution. Maths for Mums and Dads guides you through the basics of primary school maths and covers the dilemmas and problems you are likely to be confronted with, including: * number bonds, place value and decimals * long multiplication and division * fractions, percentages and decimals * basic geometry, shapes, symmetry and angles * data-handling, combinations and chance Complete with sample questions, mock exam papers and examples of children's errors, Maths for Mums and Dads will challenge and reassure in equal measure.

maths for mums and dads: Maths for Mums and Dads Rob Easta Askew, 2010-07-06

maths for mums and dads: Maths for Mums and Dads Ian Taylor, 1973

maths for mums and dads: More Maths for Mums and Dads Mike Askew, Rob Eastaway, 2013-02-21 A brilliant guide for parents through the troubled waters of GCSE maths - and to help you to help your teenager to feel confident and even enjoy it, especially when studying at home. In their first, bestselling, book Maths for Mums and Dads Rob Eastaway and Mike Askew helped you and your child make sense of the new methods and topics covered in primary school maths. But as your child embarks on secondary school, two new issues arise. First, in the build-up to GCSE, school children begin to do maths that you probably have never encountered before - or if you have, you never really got it in the first place, and have long since forgotten. Factorising? Finding the locus? Solving for x? Probability distributions? What do these even mean? More Maths for Mums and Dads gives you all the ammunition to help you to help your teenager get to grips with and feel more confident about - and hopefully even enjoy - GCSE maths. It covers in straightforward and easy-to-follow terms the maths your child will encounter in the build up to GCSE, in many cases gives practical and fun examples of where the maths crops up in the real world. In addition, the authors introduce the notion of estimation and coin a new term, Zequals. Using the Zequals method will help develop your teenager's feel for numbers, which in turn could transform their experience and enjoyment of everyday maths.

maths for mums and dads: Maths for Mums and Dads. 1973 ,

maths for mums and dads: Creative Teaching: Mathematics in the Primary Classroom Mary Briggs, Sue Davis, 2014-09-19 This stimulating text shows how primary mathematics can be creative, exciting and enjoyable. Offering teachers a dynamic and different perspective, it enables them to see and teach in creative ways that will develop their pupil's mathematical thinking potential. Creative Teaching: Mathematics in the Primary Classroom encourages students, trainees and practicing teachers to envision and develop a classroom where children can take risks, enjoy

and experiment with mathematical thinking, and discover and pursue their interests and talents in an imaginative yet purposeful way. This second edition contains key updates to reflect the changes to the primary curriculum and includes: new sections on: specialist teaching, parental engagement and approaches to homework; creative classroom environments; working walls, displays and outdoor settings; links to assessment, speaking, listening and learning theory; use of media, film, news and stories for creative learning; cross-curricula work. Featuring reflective tasks in every chapter, this book will prove essential and inspiring reading for all trainee and practising teachers looking to develop their creative practice. Aimed at primary and early years trainee teachers, NQTs and experienced teachers, this is a timely publication for teachers and schools seeking to broaden their maths curriculum, making it more creative and appealing to young minds.

maths for mums and dads: *The Parents' Guide to Specific Learning Difficulties* Veronica Bidwell, 2016-05-19 From dyslexia to ADHD, from poor working memory to slow visual processing, Specific Learning Difficulties (SpLDs) represent real differences in the way children learn. This book sets out to demystify SpLDs and provide practical strategies to support and motivate children throughout their education.

maths for mums and dads: *Speed Maths for Mums and Dads* Vali Nasser, 2013-05-08 This book will be useful for mums and dads as well as teachers who want their children at KS2 (7 -11 years) to do speedy number crunching with ease. Much of the material will be a good addition to those aspiring for the 11 plus exam. There are over 200 examples and more than 200 questions with answers. In addition to conventional methods, several Speed Methods are shown for addition, subtraction, multiplication and division. In addition there are chapters on rounding and estimating as well as on fractions, percentages, squares, and square roots. A chapter introducing algebra is also included. The author's first book 'Speed Mathematics Using the Vedic System' has had a significant following and has been translated into Japanese, Chinese, and German. The author, a qualified mathematics teacher, also managed the Qualified Teacher Status (QTS) Numeracy Assessment project at the exam body, OCR in the UK

maths for mums and dads: *Mathematicians as Enquirers* Leone L. Burton, 2004-04-30 It is amazing that the usual reply to being introduced to a mathematician is a stumbling apology about how bad someone is at mathematics, no matter how good they may be in reality. The problem is that we have come to view mathematics as an arcane branch of knowledge that only a few can aspire to understand or grasp. The sense of separation between those who have the knowledge and those who do not, is present even amongst academics where many of the same skills and research practices exist - intuition, the use of symbolic structures and the use of intuition and insight. The more worrying aspect of this separation is the ever declining numbers of students choosing mathematics as part of their curriculum beyond the stage when it is mandatory. Even worse, it would seem that the mathematics community has created a discriminatory environment that deters many students from continuing beyond secondary and tertiary education. Exit interviews with graduates show a stark rejection of their previously chosen subject. What about mathematicians themselves - how do they see themselves? Do male and female mathematicians come to know their mathematics in different ways, do they tackle different problems with varying results for their status in the research community? Does the pervasive labelling that mathematics is a male domain arise because of a lack of role models for women or through its highly competitive, hierarchical nature? Are the negative labels often associated with mathematics, i. e.

maths for mums and dads: *Mathematical Subjects* Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children, teachers, parents, and policy makers are made visible as subjects. As they learn about mathematics, children are also learning about themselves - who they are, who they might become. We can choose to listen or not to what children have to say about learning mathematics. Such choices constitute us in relations of power. Mathematical know-how is widely regarded as essential not only to the life chances of individuals, but also to the health of communities and the economic well-being of nations. With the globalisation of education in an increasingly market-oriented world, mathematics has received intensified

attention in the first decade of the twenty-first century with a shifting emphasis on utilitarian aspects of mathematics. This is reflected in the reconceptualisation of mathematical competence as mathematical literacy, loosely conceived as those ways of thinking, reasoning and working “mathematically” that allow us to engage effectively in everyday situations, in many occupations, and the cut and thrust of world economies as active, empowered and participatory citizens. It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide. We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks, raise standards, enhance achievement, close gaps, and leave no child behind in mathematics education. Industries have sprung up around the design, administration and monitoring of standardised assessment to measure and compare children’s mathematical achievement against identified benchmarks and each other.

maths for mums and dads: *Understanding Emotions in Mathematical Thinking and Learning* Ulises Xolocotzin, 2017-05-12 Emotions play a critical role in mathematical cognition and learning. *Understanding Emotions in Mathematical Thinking and Learning* offers a multidisciplinary approach to the role of emotions in numerical cognition, mathematics education, learning sciences, and affective sciences. It addresses ways in which emotions relate to cognitive processes involved in learning and doing mathematics, including processing of numerical and physical magnitudes (e.g. time and space), performance in arithmetic and algebra, problem solving and reasoning attitudes, learning technologies, and mathematics achievement. Additionally, it covers social and affective issues such as identity and attitudes toward mathematics. - Covers methodologies in studying emotion in mathematical knowledge - Reflects the diverse and innovative nature of the methodological approaches and theoretical frameworks proposed by current investigations of emotions and mathematical cognition - Includes perspectives from cognitive experimental psychology, neuroscience, and from sociocultural, semiotic, and discursive approaches - Explores the role of anxiety in mathematical learning - Synthesizes unifies the work of multiple sub-disciplines in one place

maths for mums and dads: MATHEMATICS OLYMPIOD FOR IMO ASPIRANTS JAYA GHOSH, 2015-09-01 This book has been designed to fulfil the preparation needs of candidates who aspire to crack International Mathematics Olympiad, National Talent Search Exam, and other competitive exams. The book is strictly based on the latest curriculum from International Mathematics Olympiad. It has been prepared in accordance with the latest syllabus issued from CBSE, ICSE and other school boards across the country. The book consists of three sections namely Logical Reasoning, Mathematical Reasoning and Everyday Mathematics. The Concepts, Formulae and important Tips are given in the beginning of each chapter. Fully solved Multiple Choice Questions (MCQs) with detailed explanations enhance the problem solving skills of students. Model Papers are included in the book for thorough practice, and Previous Years' IMO papers given in the CDs help candidates to understand the level of difficulty and grasp the structure of questions asked in the exam. Salient Features: i Concepts are introduced gradually i Simple, lucid and systematic presentation i Detailed solutions at the end of each chapter i Previous years' Question Papers and Model Test Papers Highly Recommended The book is highly recommended for the candidates who aspire to get distinction in Mathematics and Science Olympiads at national and international level. It will prove very useful for various other competitive examinations such as: i NTSE, NSTSE, SLSTSE i SSC, DSC, B. Ed, TET, CTET etc.

maths for mums and dads: The Elephant in the Classroom Jo Boaler, 2015-09-01 A NEW EDITION OF THE ORIGINAL BESTSELLER 'Well-researched and provides positive solutions' Times Educational Supplement In *The Elephant in the Classroom*, Jo Boaler outlines what has gone wrong in mathematics education, identifying the problems facing children in classrooms today. How can children be prepared for the mathematics they will need in the future? They need to be taught to be quantitatively literate, to think flexibly and creatively and how to problem solve. Jo Boaler offers concrete solutions for parents and teachers that will revolutionise children's experience with maths. Along with practical teaching activities, strategies and questions that can transform a child's

mathematical future, she shares a range of free and accessible online resources. 'Has attracted an enthusiastic and vocal fan club among mums, dads and professionals' Daily Telegraph

maths for mums and dads: *Mathematics Of Life* Ian Stewart, 2011-04-07 A new partnership of biologists and mathematicians is picking apart the hidden complexity of animals and plants to throw fresh light on the behaviour of entire organisms, how they interact and how changes in biological diversity affect the planet's ecological balance. Mathematics offers new and sometimes startling perspectives on evolution and how patterns of inheritance and population work out over time-scales ranging from millions to hundreds of years - as well as what's going on to change us right now. Ian Stewart, in characteristically clear and entertaining fashion, explores these and a whole range of pertinent issues, including how far genes control behaviour and the nature of life itself. He shows how far mathematicians and biologists are succeeding in tackling some of the most difficult scientific problems the human race has ever confronted and where their research is currently taking us.

maths for mums and dads: Brain Teasers Mathematics: 100 Puzzles With Solutions Dharmaraj Joseph, 2005-01-01 The varied puzzles stimulate the readers brain and anyone with a slightly mathematical bent of mind will find the book fascinating. Even those who avoid mathematics may be attracted to the story format of these puzzles as they combine deductive ability with interest and enjoyment. The book is unique and will be of interest to candidates for competitive examinations. The puzzles are sure to appeal to readers of different levels of ability. This book is bound to find a wide readership amongst people of the English-speaking world.

maths for mums and dads: Improving Primary Mathematics Jan Winter, Jane Andrews, Pamela Greenhough, Martin Hughes, Leida Salway, Wan Ching Yee, 2009-02-26 Improving Primary Mathematics provides primary teachers with practical ideas about how to bring these two worlds closer to improve children's mathematics learning. Using a number of fascinating case studies focusing on children's experiences of mathematics both inside and outside the classroom, the book asks: How do children use mathematics in their everyday lives? How can teachers use this knowledge to improve children's learning in school? What activities can teachers use with parents to help share the ways that schools teach mathematics? What can parents do to support their children's learning of mathematics? Tried-and-tested practical suggestions for activities to support and encourage children's learning of mathematics include: making videos to share teaching methods; children taking photos to show how they use mathematics at home; inviting parents into school to share in mathematics learning; and numeracy-based activities for children and their parents to do together at home. All those involved in planning, teaching and supporting primary mathematics will benefit from new insights into how learning at home and at school can be brought together to strengthen and improve children's learning of mathematics.

maths for mums and dads: **Mother Goose Math** Deborah Schechter, 2003-02 Count with Old Mother Hubbard, measure with Mistress Mary, and more!

maths for mums and dads: **Teaching Mathematics 3-5: Developing Learning In The Foundation Stage** Gifford, Sue, 2005-08-01 The book places particular emphasis on adult-initiated, number-focused activities and playful, challenging and sensitive teaching strategies to engage younger children. The strategies are based on research and work with practitioners, and are illustrated by children's own responses, such as making number jokes. It covers key areas of mathematics, including number, shape and space, measures and problem solving, with appropriate expectations and common difficulties as well as suggested activities.

maths for mums and dads: **Which Way Social Justice in Mathematics Education?** Leone Burton, 2003-02-28 This contributed volume explores equity and social justice within the field of mathematics education. In part one, Helga Jungwirth's introductory chapter provides a strong theoretical overview that is based in actual classroom behaviors and a typology that classifies the various interpretations found within this volume. Also in part one, Laurie Hart discusses developments in equity research in the United States. Part two focuses on results of studies about social justice and their impact on learning in mathematics classrooms in various parts of the world. For example, in a chapter on Peru, social justice does not just encompass gender, but also

inequalities in opportunities to learn, such as problems of resources, living and social conditions, communal demands and language needs. And, part three focuses on computers as a resource to mathematics teaching. The contributors raise several important social justice issues which have previously remained unresearched. Although there are a number of chapters specifically dealing with gender, many of the authors use one of the following strategies: their gender-specific questions are set in a wider socio-cultural context, they challenge what have threatened to become false orthodoxies, or they raise other important issues. These other issues include the meaning of democratic citizenship for mathematics classrooms, the links between parents and children learning mathematics, and the preconceptions of some teachers of underprivileged students in Australia. Other chapters explore different forms of classroom communication, participation, and assessment. The pieces on computers state that there is still not enough research to conclude whether computers in the mathematics classrooms are supportive of, or detrimental to, the learning of all students. The one thing on which every author in this volume does agree is that social justice in mathematics education has still not been attained, but that we must strive toward it to improve educational practices and society in general.
