danny the champion of the world questions: De-constructing Dahl Laura Viñas Valle, 2016-01-14 This is the first single-authored monograph on Roald Dahl since 1994. Remarkably, in spite of Dahl's commercial success, and the divided opinions he generates, very little scholarly work on the author has been produced. In the light of sociocultural constructivist theory, *De-constructing Dahl* focuses on the critical context, texts and paratexts that make up the packaging of "Dahl." It offers the first thorough overview of the criticism and the language employed to discuss Dahl since the 1970s, the difficulties that using such language entails, and how it still permeates current criticism. It delves into the relationship between Dahl's children's and adult fiction by drawing comparisons and contrasts and exploring the common traits and patterns that bring his whole work together. It also examines how Dahl constructed himself as a children's writer; how his publishing house and allies contribute to mediating and sustaining the Dahl public persona; the ways that marketing strategies are responsible for the identity of his books; and how editorial decisions about the age range, and, therefore, how the classification of a manuscript as a book for children or for adults constructs particular ideas of what "children's literature" is, and what is considered "appropriate" or "unsuitable" for children to read.

danny the champion of the world questions: Early Engineering Learning Lyn English, Tamara Moore, 2018-05-29 This book addresses engineering learning in early childhood, spanning ages 3 to 8 years. It explores why engineering experiences are important in young children's overall development and how engineering is a core component of early STEM learning, including how engineering education links and supports children's existing experiences in science, mathematics, and design and technology, both before school and in the early school years. Promoting STEM education across the school years is a key goal of many nations, with the realization that building STEM skills required by societies takes time and needs to begin as early as possible. Despite calls from national and international organisations, the inclusion of engineering-based learning within elementary and primary school programs remains limited in many countries. Engineering experiences for young children in the pre-school or early school years has received almost no attention, even though young children can be considered natural engineers. This book addresses this void by exposing what we know about engineering for young learners, including their capabilities for solving engineering-based problems and the (few) existing programs that are capitalising on their potential.
