Key Components Highlighted in the Comfortbilt HP22 Parts Diagram

Understanding some of the core parts of the Comfortbilt HP22 can deepen your appreciation for how this stove works and the importance of each component.

Burn Pot and Igniter

The burn pot is where the pellets combust to generate heat. It's essential to keep this part clean and free of ash buildup, as it directly affects the stove's combustion efficiency. The igniter works alongside the burn pot to start the pellet burning process. If your stove struggles to ignite, the parts diagram will help you identify and access the igniter for inspection or replacement.

Auger and Auger Motor

The auger is the mechanism responsible for feeding pellets from the hopper into the burn pot. The motor powers the auger's rotation, controlling pellet flow. Issues with pellet feed are often traced back to the auger or its motor, making these parts critical points of focus during troubleshooting.

Blower Fans

Comfortbilt HP22 stoves usually have two blower fans: one for circulating warm air into the room and another to exhaust combustion gases safely outside. Proper function of these fans ensures efficient heating and safe operation. The parts diagram helps locate these fans and their motors, aiding in diagnosis if you notice irregular airflow or unusual noises.

Control Board and Sensors

The control board is the stove's "brain," managing all electronic functions, including ignition timing, feed rates, and safety features.
