psychology internships raleigh nc: *International Service Learning* Robert G. Bringle, Julie A. Hatcher, Steven G. Jones, 2023-07-03 International Service Learning (ISL) borrows from the domains of service learning, study abroad, and international education to create a new pedagogy that adds new and unique value from this combination. It is a high-impact pedagogy with the potential to improve students' academic attainment, contribute to their personal growth, and develop global civic outcomes. The international service experience provides opportunities for additional learning goals, activities, and relationships that are not available in a domestic service learning course or in a traditional study abroad course. The service experience develops reflection while shedding light on and providing an added dimension to the curricular component of the study abroad course. The international education component further broadens students' perspectives by providing opportunities to compare and contrast North American and international perspectives on course content. This book focuses on conducting research on ISL, which includes developing and evaluating hypotheses about ISL outcomes and measuring its impact on students, faculty, and communities. The book argues that rigorous research is essential to improving the quality of ISL's implementation and delivery, and providing the evidence that will lead to wider support and adoption by the academy, funders, and partners. It is intended for both practitioners and scholars, providing guidance and commentary on good practice. The volume provides a pioneering analysis of and understanding of why and under what conditions ISL is an effective pedagogy. Individual chapters discuss conceptual frameworks, research design issues, and measurement strategies related to student learning outcomes; the importance of ISL course and program design; the need for faculty development activities to familiarize faculty with the component pedagogical strategies; the need for resources and collaboration across campus units to develop institutional capacity for

ISL; and the role that community constituencies should assume as co-creators of the curriculum, co-educators in the delivery of the curriculum, and co-investigators in the evaluation of and study of ISL. The contributors demonstrate sensitivity to ethical implications of ISL, to issues of power and privilege, to the integrity of partnerships, to reflection, reciprocity, and community benefits

psychology internships raleigh nc: Service-Learning Pedagogy Virginia M. Jagla, Andrew Furco, Jean R. Strait, 2015-02-01 Service-learning is a powerful method of teaching and learning that has been used effectively for more than two decades. Its efficacy has been researched in a variety of ways and this volume continues to expand that research base. In particular, in this volume, *Service-Learning Pedagogy: How Does It Measure Up?*, we explore three broad areas of service-learning research and practice that reflect broader discussions of the role of pedagogy in today's educational reform efforts: *Teacher Education*, *Crossing Boundaries: Deepening Relationships in Service-Learning* and *New Paradigms/Conceptual Frameworks*. Many have called for more rigorous methods when researching service-learning pedagogy. That has been the major impetus for this volume. We seek to generate knowledge regarding service-learning pedagogy, while developing theories about it. We surface some elusive affective characteristics of the pedagogy, which we know has the power to produce transformational learning. To this end, the authors who

have contributed to this volume effectively add to the growing body of knowledge in the field and help us get closer to understanding the extent to which service-learning does and does not measure up.

psychology internships raleigh nc: *Community Service and Higher Learning* Robert A. Rhoads, 1997-07-24 In *Community Service and Higher Learning*, Robert A. Rhoads examines the experiences of students as they commit themselves to community service during their college years. The author explores how a student's sense of self may be challenged through involvement in the lives of others within the context of community service relationships. Central to his explorations of the self is the role caring plays as a source of self understanding and identity development. Drawing upon classic symbolic interactionists such as George Herbert Mead as well as contemporary feminists such as Carol Gilligan and Nel Noddings, Rhoads suggests ways in which the self might be reconsidered with an ethic-of-care philosophy at its core. He argues that higher education ought to play a key role in fostering more relational and caring individuals and that community service offers a pedagogical opportunity for encouraging the development of more caring selves. He maintains that as society becomes increasingly complex, diverse, and potentially fragmented, caring becomes a more important facet of one's sense of self than perhaps ever before. It is only through an increasing concern for the other (the essence of caring) that one is able to bridge the relational barriers posed by the postmodern condition.

psychology internships raleigh nc: *Children's Social Consciousness and the Development of Social Responsibility* Sheldon Berman, 1997-04-17 This book breaks new ground in our understanding of the development of social consciousness and social responsibility in young people and the educational practices that promote this development. Berman shows that children's awareness of the social and political world emerges far earlier and their social and moral abilities are more advanced than we thought. Drawing on the research literature in such fields as moral development, citizenship education, political socialization, prosocial development, and psychosocial development, Berman provides educators and researchers with the developmental understandings and instructional strategies necessary to enable students to become active, caring, and responsible members of our social and political community.

psychology internships raleigh nc: *The Internship Bible* Mark Oldman, Samer Hamadeh, 2005-01-25 Lists internship opportunities in a variety of fields, giving information about selectivity, compensation, deadlines, and duration.

psychology internships raleigh nc: *Service-learning* Alan S. Waterman, 2014-03-18 Linking research and educational practice for the benefit of both is not a new idea. If practice such as service-learning is a bold departure from the status quo, however, research is not just beneficial, it is critical. If schools are to become laboratories of democracy and entrepreneurship, and if students are to become engaged as partners in renewal of their communities, a research case must be made for service-learning. Does learning take place? Will other kinds of learning suffer? What kinds of practice are most effective? Clearly, solid research is essential if this transforming way of teaching and learning is to be fully integrated into American schooling and youth development institutions. The National Youth Leadership Council (NYLC) took a first step toward joining service-learning practice with research in 1983. In 1991, NYLC created a center which initiated and encouraged program evaluation, formative research that informs and improves practice, and summative studies that measure results. This volume grew out of a National Service-Learning Conference--an annual event convened by the NYLC. A day long research seminar at the conference brought together researchers to discuss the latest developments among themselves and with practitioners. Impressive in their range and rigor, their papers offer documentation and analysis useful to an emerging research knowledge base. It is a starting point for the evidence needed to firmly establish service-learning for K-12 age people as a widely accepted way of teaching and learning.
