may 20th day in history: North Carolina Civil War Monuments Douglas J. Butler, 2013-05-11 Monuments honoring leaders and victorious armies have been raised throughout history. Following the American Civil War, however, this tradition expanded, and by the early twentieth century, the Confederate dead and surviving veterans, although defeated in battle, ranked among the world's most commemorated troops. This memorialization, described in North Carolina Civil War Monuments, evolved through a challenging and contentious process accomplished over decades. Prompted by the need to rebury wartime dead, memorialization, led by women, first expressed regional grief and mourning then expanded into a vital aspect of Southern memory. In North Carolina, 109 Civil War monuments--101 honoring Confederate troops and eight commemorating Union forces--were raised prior to the Civil War centennial. Photographs showcase each memorial while committee records, legal documents, and contemporaneous accounts are used to detail the difficult process through which these monuments were erected. Their design, location, and funding reflect not only the period's sculptural and cultural milieu but also reveal one state's evolving grief and the forging of public memory.

may 20th day in history: The Second Creek War John T. Ellisor, 2020-03-01 Historians have traditionally viewed the Creek War of 1836 as a minor police action centered on rounding up the Creek Indians for removal to Indian Territory. Using extensive archival research, John T. Ellisor demonstrates that in fact the Second Creek War was neither brief nor small. Indeed, armed conflict continued long after peace was declared and the majority of Creeks had been sent west. Ellisor's study also broadly illuminates southern society just before the Indian removals, a time when many blacks, whites, and Natives lived in close proximity in the Old Southwest. In the Creek country, also called New Alabama, these ethnic groups began to develop a pluralistic society. When the 1830s cotton boom placed a premium on Creek land, however, dispossession of the Natives became an economic priority. Dispossessed and impoverished, some Creeks rose in armed revolt both to resist removal west and to drive the oppressors from their ancient homeland. Yet the resulting Second Creek War that raged over three states was fueled both by Native determination and by economic competition and was intensified not least by the massive government-sponsored land grab that constituted Indian removal. Because these circumstances also created fissures throughout southern society, both whites and blacks found it in their best interests to help the Creek insurgents. This first book-length examination of the Second Creek War shows how interethnic collusion and conflict characterized southern society during the 1830s.
