mrs ps interactive classroom 2018 answer key: *Recalibrating teacher training in African higher education institutions* Sifiso Sibanda, Gideon (Deon) P. van Tonder, Washington T. Dudu, 2023-03-01 This book critically examines the role of governments in promoting parity during and in post-pandemic education. This comes from the realisation that the pandemic has deepened the crisis by depleting the meagre resources that African countries might have devoted to 'normative educational practices' where those on the margins would have been pushed further behind while the privileged would have been further initiated into the cultural and capital flows of private schools and historically research-intensive institutions of higher learning. This has far-reaching implications for the education of underprivileged citizens, and education, particularly modes and modalities of delivery, has to be reimagined to subvert the challenges wrought by the pandemic. This book significantly bridges the gap between the pre-and post-COVID-19 pandemic pedagogical practices and the erstwhile modalities that have been resilient over time. The book focuses on ways to stave off pedagogical challenges that face countries as the global pandemic makes its mark.

mrs ps interactive classroom 2018 answer key: Cases on Innovative and Successful Uses of Digital Resources for Online Learning Sullivan, Pamela, Sullivan, Brian, Lantz, Jessica, 2022-03-11 Education at all levels will continue to be dominated by technology for the foreseeable future. mrs ps interactive classroom 2018 answer key: The role of evidence in developing effective educational inclusion Joseph Mintz, Brahm Norwich, 2023-12-13 There has been considerable interest internationally in how research can be effectively translated to have an impact on practice in schools. The application of evidence informed approaches in the field of education is contested and debated. Such debates are intensified in relation to the issue of how best to include children with diverse learning needs in the classroom. The role of knowledge, science and evidence in how we both conceptualize and best support children with special educational needs and other forms of diversity in the classroom, remains an open question in terms of both policy and practice. Although there is a considerable and growing body of literature on evidence informed practice in education in general, there has been less attention paid to its implications for the domain of educational inclusion specifically. However, tensions between differing conceptualisations of difference and the role of categorisation present questions as yet not fully answered as to the ways in which evidence can and should articulate with practice in this specific domain. For example, issues of what is inclusion, the place of norms and values that define inclusion, how we conceptualize and think about difference, across culture, language and cognition, are raised when we think about the application of evidence

to practice in the area of educational inclusion.

mrs ps interactive classroom 2018 answer key: Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs, based on truths, which are either axioms or previously proven theorems. Thus, it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed, the Enlightenment view of the rational human mind that reasons, makes decisions and solves problems based on logic and probabilities, was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet, these deviations should not be called errors: as Cognitive Psychologists have demonstrated, these deviations may be either valid heuristics that succeed in the environments in which humans have evolved, or biases that are caused by a lack of adaptation to abstract information formats. Humans, as the cognitive psychologist and economist Herbert Simon claimed, do not usually optimize, but rather satisfice, even when solving problem. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics-and-biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world (correspondence) rather than in terms of conformity to content-free norms of coherence (e.g., transitivity).
